SUMMARY

Software Engineering student at PUC Minas, focused on backend development, web applications, and process automation. Hands-on experience with **Java**, **Spring Boot**, **TypeScript**, **React**, **PostgreSQL**, **Firebase**, and **n8n** through academic and personal projects. Seeking an internship or junior position to apply software development, documentation, Git version control, and problem-solving skills to real-world products.

EDUCATION

B.S. in Software Engineering

PUC Minas - Coracao Eucaristico

📅 Jan 2024 – Present 📍 Belo Horizonte, MG

- Coursework and practice in software production, requirements engineering, project management, and systems development.

Industrial Automation Technician

SENAI Maria Madalena Nogueira

📅 2021 – 2023 📍 Betim, MG

- Technical training focused on electronics, sensors, PLCs, robotics, and process automation.

TECHNICAL SKILLS

Languages: Java TypeScript JavaScript C++ HTML CSS

Backend and APIs: Spring Boot REST APIs Business logic

Frontend: React Web interfaces Responsive UI

Data and automation: PostgreSQL MySQL Firebase n8n Power BI Excel

Tools: Git GitHub GitHub Actions VS Code IntelliJ LaTeX

Languages: Portuguese native English B2 Spanish A2

EXPERIENCE

Municipality of Betim **Technology Intern**

📍 Betim, MG

📅 August 2025 – March 2026

- Provided technical support to users and internal systems, helping maintain operational stability and resolve incidents.
- Developed internal solutions to fix recurring problems and improve workflows used by municipal departments.
- Supported maintenance and continuous improvement of systems, documenting requests and collaborating with operational teams.
- Contributed to process automation and adjustments to reduce manual tasks and operational errors.

Municipality of Betim **Ombudsman Office - Statistics**

📍 Betim, MG

📅 March 2024 – July 2025

- Built **Power BI** dashboards and analytical reports using multiple data sources.
- Automated controls and reports with **Excel**, improving information organization and tracking routines.
- Performed statistical modeling and analysis to support strategic reports and management decisions.
- Organized calculations, indicators, and data consolidations to make deliverables clearer and reusable.

SELECTED PROJECTS

Fishing Pond Management System

🐙 github.com/ICEI-PUC-Minas.../pesque-e-pague

- Platform for managing pay-to-fish venues, integrating inventory, sales, reservations, equipment rentals, and financial reports.
- Designed to replace manual processes, organize operational data, and improve the experience for administrators and customers.
- Technologies: TypeScript, React, Java, Spring Boot, and PostgreSQL.

Payroll Calculation System

🐙 github.com/pm-puc-minas/calculo-folha-pagamento

- System for calculating salaries, bonuses, benefits, legal deductions, and payroll reports.

- Implemented web features with a React/TypeScript frontend and Java Spring Boot backend.
- Technologies: Java, Spring Boot, React, TypeScript, CSS, and PostgreSQL.

CarExpress

 github.com/BernardoApl/CarExpress

- Vehicle management system with create, search, update, and delete features.
- Organized CRUD functionality and business rules to manage system records.
- Technologies: TypeScript, JavaScript, and CSS.
